Claims 49, 50, 53, 61, 62 and 65 are rejected under 35 USC 102 as anticipated by Hatschek, Angeloff or Maruyama for the specific reasons set forth in the previous office action. Applicants have argued that the electrode connections of the references do not extend in the circumferential direction at least a "substantial extent" and thus do not anticipate the claimed structure. Hatschek (fig. 2), Maruyama (figs. 1 and 10) and Angeloff (fig. 7) each show the leads extending along the circumferential surface of the piezo stack. "A substantial extent" is not seen as any quantifiable physical structure that could be differentiated from the prior art structures. No specific dimensions or limits (e.g. 35 percent of the circumference) are specified; thus no measurable limits different from the prior art are cited. "Substantial" is in the eye of the beholder. Obviously Angeloff, Hatschek and Maruyama provided lead widths they considered "substantial" enough for the job. The Random House College Dictionary (Revised Edition) defines substantial as "of ample amount", "quantity or size" or "of solid quality". Thus, "a substantial amount" is not seen as a patentable distinction.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR
